Welcome to PlantUML!

You can start with a simple UML Diagram like:

```
Bob->Alice: Hello
```

Or

```
class Example
```

You will find more information about PlantUML syntax on <https://plantuml.com>

(If you use this software, you accept its license)

(Details by typing `license` keyword)

**PlantUML 1.2021.12**

**<b>This version of PlantUML is 126 days old, so you should

## Level 2: Container diagram

Once you understand how your system fits in to the overall IT environment, a really useful next step is to zoom-in to the system boundary with a Container diagram. A "container" is something like a server-side web application, single-page application, desktop application, mobile app, database schema, file system, etc. Essentially, a container is a separately runnable/deployable unit (e.g. a separate process space) that executes code or stores data.

The Container diagram shows the high-level shape of the software architecture and how responsibilities are distributed across it. It also shows the major technology choices and how the containers communicate with one another. It's a simple, high-level technology focussed diagram that is useful for software developers and support/operations staff alike.

**Scope:** A single software system.

**Primary elements:** Containers within the software system in scope. Supporting elements: People and software systems directly connected to the containers.

**Intended audience:** Technical people inside and outside of the software development team; including software architects, developers and operations/support staff.

**Notes:** This diagram says nothing about deployment scenarios, clustering, replication, failover, etc.
